Economic Data Analysis with ADE+

Ana Jesús López Menéndez
Departamento de Economía Aplicada, Oviedo

Information and Communication Technologies (ICT) have introduced main changes in the dissemination and treatment of the statistical information, also affecting the teaching and learning methods. In this paper we summarize our experience with ADE+, a software which has been specifically developed for the teaching of Economic Statistics. We briefly describe the structure and the main options of the programme, also including a synthesis of our experience with ADE+ in both the presential and the virtual teaching.
